Sitting for hours at a time is unhealthy and can even lead to death. Today, however, many people spend more time sitting than sleeping.

Researchers say that all the time spent at the desk, at the computer, or in front of the television is taking years off your life. Ancient humans spent their days hunting, working, and moving from place to place. So being active is what our bodies are designed for. As a rapid reaction(反应) to this discovery, many people have begun using standing desks. However, this really isn't an answer to the question.

A standing desk is a desk specially designed for use without a chair. There are many kinds of them, including normal work desks and special standing computer desks. Researchers say that simply standing instead of sitting won't make your body much better. Standing only costs a few more calories than sitting and places more stress on your joints(关节) and back. The best way is to actually move around more. Take a walk around the office every half an hour. You can also walk over to your colleagues and

talk to them instead of sending emails.

These are just a few ways to start moving more while at work. Outside of work, of course, be sure to do plenty of exercise.
